MEMORANDUM FOR: John

Here are answers to your questions from [redacted] concerning the request to publish a technical paper. It appears in order and ready to go.

In the past we have found that [redacted] has read these requests personally and has asked rather probing questions.

25X1 [redacted]

6 Jan. 1970

25X1 [redacted] has requested permission from the army to publish the data and has a letter of approval to do so.

He was studying for his PhD and employed by Purdue Univ. under a teaching fellowship and participated in the research by Purdue for the army. The University encouraged him to publish this.

It is customary to include a footnote giving credit to the research program. He feels the army would expect such credit in their approval for his publishing the data.

I feel the subject of Bob's paper has value to photogrammetrists, at least those who are concerned with precision measuring, aerial triangulation, geodetic control, etc. Part of our Precise Measurement Study and the [redacted] Accuracy Study is concerned with the relationship of the background to the object in ability to point, of which this paper covers one aspect.

Queries for [redacted] 25X1

1. What are the proprietary aspects of [redacted] 25X1 publishing a paper based on research done under contract to Army Engineers.

- For example, has U.S. Army Engineer Topo Lab Research Institute OK'd publication?

- Who was [redacted] 25X1 working for at the time -- what private Co. or U. -- have they OK'd publication?

- Does the footnote, incl the contract no. help anyone?

Approved For Release 2004/02/11 : CIA-RDP78B05703A000200050004-5

Copy 2

2. Lastly, does [redacted] 25X1
think that this is a "good"
paper -- one that will add
something to the unfettered
public world of photogrammetry?
